

a¹ 5. An assembly according to claim 1, characterized in that the electric starter motor (3) has power ranging from 5 HP to 15 HP.

a² 7. An assembly according to claim 1, characterized in that the main electric motor (2) has power of approximately 50 HP.

8. An assembly according to claim 1, characterized in that the electric starter motor (3) is coupled to the main electric motor (2) by means of a rotation axle (4).

9. An assembly according to claim 1, characterized in that the electric starter motor is coupled to the main electric motor by means of a pulley.

10. An assembly according to claim 1, characterized in that the electric starter motor is coupled to the main electric motor by means of a gear.

A³ 16. A method according to claim 11, characterized in that the main electric motor is actuated just before reaching the nominal rotation.

17. A method according to claim 11, characterized in that the main electric motor is actuated right after reaching the nominal rotation.
